<p>It is definitely hard to evaluate how much provision, money and time will it take for the world to switch to electric vehicles. But the only thing we can totally be sure about is that electric vehicles can serve as the sustainable solution to current transport needs. But as the author of the given text states, in order to reach the point where every car owner drives an electrically-powered automobile, quantum leap in technologies is needed.</p> <p><i>opinion</i> I share this opinion with an author but, unfortunately, the key problem is not only about technologies or some environmental issues, but about how conservative our society is. Some people just hold an opinion that electric vehicles are not reliable enough and they won't use them.</p> <p>On the flip side these types of transport are quite costly, especially with Tesla rising their prices and promoting luxurious cars. In order to see meteoric progress we have to alter our approach. Of course, working on technological side of the problem is vital too, but it would be much easier if society was acquainted with not only how harmful petrol-driven vehicles are to the nature, but how available and convenient their <u>analogical</u> ones are.</p> <p>To sum up, this issue has to be solved with complex answer</p> <p>To sum up, this issue has to be solved <i>meticulously</i> complexly so that all aspects of this question would be clear to from both technological, economical, environmental sides.</p>	Количество слов: 223
