

Progress has always been important to society. Thanks to progress, order is maintained in society and in such spheres as the economic sphere, the political sphere, the social sphere and the spiritual sphere.

Innovation plays a key role for PR and advertising. People in this sphere have the task of selling new and new inventions and services. In principle, this is the main task of advertisers. They will lose their jobs without innovation.

So, I came up with my own innovation. I called it 'OZ'. It is a device that allows a person to fully understand what his/her body lacks. This technology can understand the level of sugar, the level of iron, amount of proteins, fats, carbohydrates or vitamins and other important substances in our bodies, pressure, temperature in just a few seconds. It allows you to understand whether a person has bruises or injuries, whether a person is under stress and what to do to avoid feeling unwell. All these things can be done quickly and easily using my device, which can easily fit in your pocket and will be completely inexpensive. So everyone will be able to buy it. It looks like a slightly convex mirror that opens and closes. It will work in different ways: in order to find out the level of sugar or other substances, it will gently prick a finger, analyze and give out the result; in order to understand if there is any damage, just put the device on a surface or on the floor and it will scan you.

As a rule, we take tests to find out more about our body. And it takes several days before we know the results. Thanks to my technology, as I said, we can understand results in seconds and it is a great advantage. Many will be interested in such a device. For example, elderly people who find it rather difficult to get to the hospital. They will be able to understand what their body lacks at home. It is a useful thing for those who suffer from diabetes or those who experience constant stress that affects their health.

In my conclusion, I would like to note once again how practical this thing will be. As I said, it will not be expensive, it will easily fit even into your pocket or your purse and the benefits will be significant.
