

A subcutaneous chip that reads human emotions.

The chip consists of a chip and a capsule in which it is placed. The chip size is 0.5-1 millimeter. It is placed under the skin just behind the ear lobe. The procedure is absolutely painless, and the chip is not felt.

It reads your heart rate and sweating level. Chip keeps track of the emotions that you are experiencing. For example, fear, anxiety, happiness, or pronounced joy. It also determines what external factors contributed to this, influenced the manifestation of certain emotions.

This chip is connected to your phone. By downloading the app "Our feelings", you sync it with the chip. The app will list all the emotions experienced along with the time they were experienced and the external factors that affected them.

The app is released primarily for people diagnosed with an eating disorder, as one of the main causes of this disorder is the inability to analyze their emotions. We really hope that the app will help you analyze what and how it affects your life. Get rid of external negative factors. To make you happy.
