

TELEGRAM BOT

The main task of the bot is to help people with placing ads of their content

1) First of all, the bot will provide a little information about what it is

2) Then it offers to click /start and chat

3) You should write the main information about what exactly you want to advertise and promote on your site, profile, etc

4) After that, the bot starts analyzing your content, your audience, who is interested or not interested in what, and then begins to select where it would be beneficial to place ads on you

This may be quite simple, but it's quite effective

Develop the world of technology!

THAT'S ALL!
